Children and Young People Living with HIV/AIDS-Pranee Liamputtong 2016-06-14 This book focuses on the issues encountered by children and young people who are living with HIV/AIDS. It examines their lived experiences associated with HIV/AIDS, and studies groups of children and youngsters from around the globe. Connecting empirical information with real-life situations, the book brings together results from empirical research that relates to these children and young people. Its chapters can be used as evidence for health care providers to implement socially and culturally appropriate services to assist individuals and groups of children and young people who are living with HIV/AIDS in many societies. Many of these young people are from the most marginalized and vulnerable groups; and many have been orphaned by the death of their HIV-positive parents. Marginalized young people such as refugees, migrants and street children are most at risk due to the use of illicit drugs, their exposure to unprotected sex (in exchange for food, money and protection), and stigma associated with their marginalized lives. The impact that HIV/AIDS has on the opportunities for these young people to be able to lead healthy adult lives is considerable. This book gives a voice to these children and young people and advances our understanding of their lived experiences and needs.

Children Caring for Parents with HIV and AIDS-Ruth Mary Clare Evans 2009-03-11 This ground-breaking book focuses on the experiences and perspectives of children that are caring for a parent with HIV in the global North and South. Drawing on original research data, this book presents a unique insight into the similarities and differences in children's experiences across diverse socio-economic, cultural and welfare contexts. This book makes a significant contribution to the growing research evidence on children with caring responsibilities ('young carers') and the impacts of HIV/AIDS on families globally. It examines the impacts of caregiving within families affected by HIV/AIDS; children's and families' resilience; the factors influencing whether children become involved in care work; and local and global policy responses. Additionally, it provides the accounts of parents living with HIV and service providers working with families. This book will be of interest to policymakers and practitioners in HIV/AIDS, and to researchers, academics and students concerned with international development; social policy; childhood and youth studies; social work; health and social care; education; children's services; and, nursing and palliative care.

Children and HIV/AIDS-Gary R. Anderson 1999-01-01 This volume is
intended as a resource for personnel within the child welfare field serving children and families whose lives are touched by HIV and AIDS. The contributors add insight to and fuel the discussion of the fight against AIDS. They provide tools to help better serve the children and adolescents that the current epidemic so tragically affects.

**Principles of Perinatal and Pediatric HIV/AIDS** - Lala Mamatha M 2011-10-01 This book is a comprehensive, reliable, up-to-date reference focused on evidence-based, practical information that is required not only to prevent transmission of HIV to children, but also provide holistic care for the infected child. Discusses extensively all the major issues and provides a holistic approach on prevention, care and management of children infected/affected with HIV/AIDS. This book focuses on evidence-based practical information and recent advances in the field and emphasizes on prevention with special reference to mother-to-child transmission of HIV/AIDS. Chapters contributed by the Who’s Who in the field from across the world. This book is useful for hospitals, institutions, governmental and non-governmental organizations involved in caring for children and all practicing physicians, clinicians, pediatricians, obstetricians, family doctors and postgraduate students.

**Caring with Confidence** - Kathy Attawell 1997 This briefing paper focuses on children ages birth to five years and is intended primarily for health workers in developing countries who are responsible for the management of young children with HIV and AIDS. It provides practical information on: (1) how HIV is transmitted to infants and young children; (2) how transmission can be prevented; (3) how to diagnose HIV and AIDS in young children; (4) how to care for children with HIV, including treatment of common infections; (5) how to provide support to families caring for sick children; (6) how children who are not infected may be affected by HIV; and (7) how HIV and AIDS in children affects health workers and other caregivers. Other important issues related to HIV/AIDS and children that health workers need to be aware of are also addressed, including community support, orphans, sexual abuse, and HIV testing and counseling. A list of selected printed and organizational resources on AIDS and children is included, along with a glossary of relevant terms. Appendices include a fact sheet on HIV and AIDS and an outline of a workshop and exercises that may be helpful in educating health workers about HIV/AIDS and children. (CR)

**HIV and Disability** - Institute of Medicine 2010-11-17 The Social Security Administration (SSA) uses a screening tool called the Listing of Impairments to identify claimants who are so severely impaired that they cannot work at all and thus qualify for disability benefits. In this report, the Institute of Medicine (IOM) makes several recommendations for improving SSA’s capacity for determining disability benefits more accurately and quickly using the HIV Infection Listings.

**HIV/AIDS in South Africa** - Chris Jennings 2012 Few people realize that the familiar HIV/AIDS global statistics are actually estimates. For example, UNAIDS estimated that the Republic of South Africa had 140,000 HIV/AIDS deaths in 1997. However, after tabulating all deaths for 1997, the Republic of South Africa attributed only 6,635 deaths to HIV/AIDS. Such discrepancies are rarely noted. The Republic of South Africa (RSA) stands as the exemplar of these discrepancies, and is reputed to have the world’s largest AIDS epidemic with an estimated 5.6 million people living with HIV/AIDS (PLWH) in 2008. Such PLWH estimates, as with the estimates of HIV/AIDS deaths, are highly questionable. The reasons behind these discrepancies are clarified by describing two common misunderstandings of HIV infection that contribute to poor mathematical modeling outcomes. Unfortunately, the health authorities in the Republic of South Africa grant more validity to computer-generated estimates than to their own empirical death counts. The author discusses why these modeled estimates, and the HIV sero-prevalence surveys upon which they are based, are simply implausible. Presented with full references are raw numerical data on: the tabulated number of HIV/AIDS deaths in the RSA; the number of AIDS cases detected by RSA disease surveillance systems; UNAIDS/WHO estimates for AIDS deaths in the RSA; and UNAIDS/WHO estimates for the number of people living with HIV/AIDS in the RSA. The total cumulative HIV/AIDS cases in the United States and Africa are also presented for comparison, and to place the African and RSA data within appropriate epidemiological context. Overall, these data span from 1981 to 2009. Altogether, these data, plus additional information detailing the nature of HIV infection and
heterosexual HIV transmission rates, explain why the hyperbolic mathematical estimates and HIV antibody test surveys - the primary sources of HIV/AIDS data in Africa - are simply implausible.

**HIV/AIDS Information for Children**- Virginia A. Walter 1996-01-01
Provides accurate information about HIV/AIDS, offers advice on appropriate ways adults can share this knowledge with children, and features an annotated listing of fiction and non-fiction books for adults and children that deal with HIV/AIDS and related topics.

**HIV Infection in Children and Adolescents**- Raziya Bobat 2020-02-27
This book serves as a reference work on pediatric HIV infection and covers the full bandwidth of topics from an introduction to pathogenesis and epidemiology, over the transmission of the HI virus, to clinical manifestations, treatment, and prevention strategies. Diseases and disorders occurring in HIV infected persons are discussed in detail. The book covers special populations, such as neonates born to an HIV positive mother and adolescents and examines the specific ways of managing HIV disease in these patient groups. This is the first book to cover palliative care as well as ethical, legal and social issues of HIV infection.

**Children, Families, and HIV/AIDS**- Nancy Boyd-Franklin 1995-05-12
Presents a family-focused, culturally sensitive, and systems-coordinated approach for the provision of effective service delivery and care to HIV/AIDS children and their families. Replete with in-depth clinical case examples, it describes an array of modalities, including family, individual, and group treatment, as well as hypnotherapeutic techniques for nonpharmacologic pain management.

**Memory Books - Struggling Against the Disappearance**- Nora Demattio 2012-02 Seminar paper from the year 2009 in the subject Health Science, grade: 1.00, University of Vienna (Institut der Kultur- und Sozialanthropologie an der Universitat Wien), language: English, abstract: It was the 1st of december 2008 at 9 oclock p.m. when I turned on my television and switched to ARTE, to watch a documentary I had read about. It was called "Memory Books - Damit du mich nie vergisst." I wanted to give it a try although I expected another depressing representation of "Africa" suffering from and dying of HIV/AIDS, as it has been almost common on the World AIDS Day. It didnt fulfill my expectations, in no way. I was touched, I was inspired and I wanted to know more about the situation of especially women and children affected by HIV/AIDS and the "Memory Project" of Uganda. On the basis of this experience, in this paper I will have a closer look at Uganda, at the situation of parents, in particular of women living with HIV/AIDS on the one hand, and on the other hand at the situation of the children affected by the disease and who are left behind after the death of their parents. First I will start with an overview of HIV/AIDS in Uganda. Then I will provide an insight into the situation of women in Uganda in association with the epidemic, also concerning the law on domenstic and gender-based violence as on of the main reason for new and disproportionate infections of females, and the impact on children. Furthermore I will introduce the "Memory Project" and its core, the
"Memory Books," which was started in Uganda through the national NGO NACWOLA (National Community of Women Living with HIV/AIDS), and point out the importance for both of them, parents and children. The aim of my paper will be to reflect the situation of women and children considering HIV/AIDS, and to provide an insight into NACWOLAs "Memory Project" and its "Memory Books." I want to overview the structure and to give a review on the goals of this program, as well as on its offered possibi"
book discusses emerging advances in HIV-AIDS management to support strategies for control and elimination.

**A Clinical Guide to Pediatric HIV**-Tiffany Chenneville 2017-02-11 This book examines the impact of pediatric HIV on children, adolescents, and their families. Beginning with an overview of pediatric HIV epidemiology, it traces the medical, psychological, and social dimensions of HIV through the trajectory of childhood and youth. It examines the latest research on a wide range of topics, including treatment adherence, cultural, legal, and ethical issues, and HIV stigma and its reduction. Chapters offer expert recommendations for clinicians working with children with HIV as well as researchers studying pediatric HIV. In addition, the book also discusses daily concerns associated with pediatric HIV, such as disease management, coping, access to services, risk prevention, and health promotion. Topics featured in this book include: The impact of pediatric HIV on families. Psychosocial considerations for children and adolescents with HIV. HIV prevention and intervention in the school setting. HIV disclosure in pediatric populations. How to design effective evidence-based HIV risk-reduction programs for adolescents. A Clinical Guide to Pediatric HIV is a must-have resource for researchers, clinicians, and graduate students in child and school psychology, social work, and public health as well as pediatric medicine, nursing, epidemiology, anthropology, and other related disciplines.

**Medical Management of AIDS in Children**-William T. Shearer 2003 Here's expert, multidisciplinary guidance on the diagnosis, treatment, and care of HIV-infected children. 49 preeminent leaders in the field of pediatric AIDS explore the unique needs and day-to-day clinical care of this population, including viral interactions, prevention and treatment issues, and control of HIV-induced complications. This groundbreaking resource also offers in-depth coverage of the special features of pediatric infection and AIDS-including obstetrical risk factors, the developing immune system, neuro-developmental abnormalities, antiretroviral prevention of HIV infection, psychosocial issues, and much more. Stresses the specific features of pediatric AIDS, including the unique 9-month exposure to maternal HIV infection · precise timing of infection · prolonged levels of HIV in the blood of infants · HIV attack of the developing immune system · obstetric risk factors · acquisition of infection from breastfeeding · alternate diagnostic methods · antiretroviral prevention of HIV infection · potential for thymic immunoreconstitution · neuro-developmental abnormalities · early cardiovascular compromise · pain management · primary care · quality of life and psychosocial issues · and the adolescent HIV patient. Discusses the virology of maternal HIV infection and its impact on transmission to the infant as well as the affect of maternal health on the child’s disease progression. Features in-depth coverage of antiretroviral therapy, including highly active antiretroviral therapy (HAART), immune-based therapy, and the future of vaccine therapy. Explores pediatric HIV infection in developing countries and the global impact of children with AIDS and AIDS orphans. Explains the unique nature of organ system compromise and failure in pediatric HIV infection-including pulmonary, cardiac, dental, dermatologic, gastrointestinal, and hematologic—as well as cancer. Presents treatments used to counteract secondary infections. Encompasses issues specific to primary care, nurse care, and managed care.

**Pediatric AIDS**-Philip A. Pizzo 1998 Recommended in the Brandon/Hill selected list of print books and journals for the small medical library - April 2001 & 2003 The Third Edition of this very popular book offers the most authoritative and comprehensive review of the impact of the HIV disease in infants, children, and adolescents.

**HIV, AIDS, and Childbearing**-Philip Franklin Wagley Professor of Biomedical Ethics and Director of the Bioethics Institute Ruth R Faden 1996 Whether, with whom, and when to have children are among the most precious of our private decisions. Increasingly, however, the interest of others in these decisions raise difficult questions about the role of government and health professionals in influencing reproductive choice. Nowhere is this tension felt more keenly than in the context of HIV and AIDS. This book takes on the tough issues related to HIV and childbearing: Is there a moral right to have children? What are the limits of persuasion? Are there constitutional constraints on interference with reproduction? What are the precedents with restricting the childbearing behavior of women who use drugs? The book includes original work by doctors, lawyers,
ethicists, and public health professionals. Also included are the experiences of HIV-infected women and their health care providers. Interviews were conducted over a two-year period with HIV-infected women and with health care providers from four cities to examine what issues of childbearing in the context of HIV mean to them. The book is divided into four sections on medical and public health issues, legal issues, ethical and social issues, and comments from the community. It concludes with recommendations for clinical practice and public policy. Public policy makers, health care providers, practitioners in bioethics, pediatrics, health law, and obstetrics/gynecology will find this book invaluable when dealing with issues related to HIV and childbearing.

A Generation at Risk - Geoff Foster 2005-09-12 An insightful study on children orphaned as a result of the AIDS epidemic with a Foreword by Desmond Tutu.

HIV/AIDS Internet Information Sources and Resources - Jeffrey Huber 1998-08-12 HIV and AIDS information on the Internet can be very overwhelming. HIV/AIDS - Nancy Dumais 2017-02-22 With increasing efficacy of antiretroviral therapy, HIV/AIDS has shifted from a disease with high mortality to a chronic illness with substantial longevity. However, researchers, physicians and social workers still face many challenges, and it is important to raise awareness on several aspects that people living with HIV/AIDS have to deal in their daily lives. This book has assembled an array of chapters on the medical, social and economic aspects of HIV/AIDS. The chapters were written by experts from around the globe reflecting the importance of the topic. This book will be of great interest not only to graduate students but also to active academics and practitioners.

The Evolution of HIV - Keith A. Crandall 1999-04-26 "As a model for viral evolution, this book is a gold mine." -- European Molecular Biology Organization Reports

AIDS and Adolescents - Lorraine Sherr 1997 AIDS and Adolescents provides insight into a wide range of adolescent issues. Much of the HIV epidemic response has been at the individual level in the hope that this narrow focus will provide the key to containment and resolution of the spread of the disease. In this text a series of contributions have been compiled to explore adolescent issues ranging from sexual behaviour, health education campaigns, to HIV prevention and HIV/AIDS care. Chapters provide an...
overview of adolescent problems, such as homelessness, pregnancy, and gender, and explore why these problems are so often overlooked. They examine facts and fictions associated with adolescent risk, challenging some of the basic current notions underpinning approaches to the subject. There are particular focused studies of Australian adolescents’ beliefs about HIV and STDs and also the American adolescent’s perceptions of drug injection.

Teaching Children with AIDS-Patricia Ainsa 2000 This study examines changes in pre-service teachers’ knowledge, attitudes, and educational intent to implement HIV/AIDS class-room curriculum and universal precautions after participating in HIV/AIDS in-service training. Valuable pre-service teacher training information was obtained as questionnaire responses were recorded prior to and as a result of an in-service program for pre-service student teachers at a U.S.-Mexico border university.

HIV, Substance Abuse, and Communication Disorders in Children-Robert Martin Screen 2007 Make sure every child gets a chance to be heard HIV, Substance Abuse and Communication Disorders in Children examines the language problems of young children from special populations. Essential as a textbook for graduate and upper-level undergraduate studies and as a reference resource, this unique book presents up-to-date research and compelling case studies that illustrate how prenatal exposure to drugs, alcohol, and HIV can affect a child in utero and continue to handicap its development after birth. Each chapter includes discussion threads and review questions to promote critical thinking and clinical problem-solving skills in the classroom. HIV, Substance Abuse and Communication Disorders in Children looks at the negative impact a mother’s lifestyle practices can have on her developing child with a nod toward the significant prevalence of HIV and substance abuse in today’s society. Some estimates place the number of infants born after prenatal exposure to illicit drugs as three-quarters of a million—every year. When alcohol is added, the figure rises to more than 1 million. This powerful book focuses specifically on the serious consequences of alcohol, marijuana, cocaine, and crack cocaine abuse, including poor language development and speech delays, limited vocabulary, the inability to make their needs known, poor articulation, the inability to follow commands, limited expressive language skills, and the inability to understand the real meaning of words and generalize them. And of the nearly 5,000 children in the United States living with AIDS, almost all will struggle with speech production and communication disorders as the disease affects their brain, spinal cord, and central nervous system. HIV, Substance Abuse and Communication Disorders in Children examines: the effect of drugs on the brain pregnancy and drug use trends common drugs of abuse Kosakoff’s syndrome fetal alcohol syndrome (FAS) among Native Americans and African Americans neurologic sequelae speech and language intervention rehabilitation considerations treatment and family counseling and much more HIV, Substance Abuse and Communication Disorders in Children is essential for graduate and undergraduate students working with language disorders in special populations.

Guidance for National Tuberculosis Programmes on the Management of Tuberculosis in Children-Who Global Tb Programme 2015-02-05 It is estimated that one third of the world’s population is infected with Mycobacterium tuberculosis (the bacterium that causes tuberculosis (TB)), and that each year, about 9 million people develop TB, of whom about 2 million die. Of the 9 million annual TB cases, about 1 million (11%) occur in children (under 15 years of age). Of these childhood cases, 75% occur annually in 22 high-burden countries that together account for 80% of the world’s estimated incident cases. In countries worldwide, the reported percentage of all TB cases occurring in children varies from 3% to more than 25%. The Stop TB Strategy, which builds on the DOTS strategy developed by the World Health Organization (WHO) and the International Union Against TB and Lung Disease, has a critical role in reducing the worldwide burden of disease and thus in protecting children from infection and disease. The management of children with TB should be in line with the Stop TB Strategy, taking into consideration the particular epidemiology and clinical presentation of TB in children. These consensus guidelines were produced to help the National Tuberculosis Programmes on the management of tuberculosis in children.

Substance Abuse Treatment for Persons with HIV/AIDS- 2000

AIDS Sourcebook - Ivy L. Alexander 2008-01 "AIDS Sourcebook, Fourth Edition, provides updated information about HIV and AIDS and how it is transmitted, diagnosed, and treated. Information about prevention, risks, screening, treatments, complications, and tips on living with AIDS are included, along with a special section on the needs of HIV-infected women and children. Reports on current research initiatives and clinical trials, a glossary of related terms, and directories for further help and information are also provided."--BOOK JACKET.

History Of AIDS - Glanz Veronika 2013-11-09 The young were once considered relatively safe from HIV/AIDS. Today, more than half of all new infections strike people under the age of 25. Girls are hit harder and younger than boys. Infant and child death rates have risen sharply, and 14 million children are now orphans because of the disease. The world's two billion children and adolescents are at the center of the HIV/AIDS crisis. And yet they are the ones who offer the greatest hope for defeating the epidemic.

Children and HIV/AIDS - Gary Anderson 2017-11-30 In December 1982, the Centers for Disease Control received the first reports of cases of children with HIV/AIDS. Since that time, the child welfare system, as well as other human service organizations, have been coping with and responding to the crises of children and families living with HIV/AIDS, including the considerable number of children affected by AIDS through the illness of their parents, siblings, or other family members. This volume is intended as a resource for personnel within the child welfare field serving children and families whose lives are touched by HIV and AIDS. The contributors add insight to and fuel the discussion of the fight against AIDS. They provide tools to help better serve the children and adolescents that the current epidemic so tragically affects. Chapters and contributors include: "Factors Associated with Parents' Decision to Disclose Their HIV Diagnosis to Their Children" by Lori S. Wiener, Haven B. Battles, and Nancy E. Heilman; "Custody Planning with HIV-Affected Families" by Sally Mason; "Correlates and Distribution of HIV Risk Behaviors Among Homeless Youths in New York City" by Michael C. Clatts, W. Rees Davis, J. L. Sotheran, and Aylin Attilasoy; and "HIV Prevention for Youths in Independent Living Programs" by Wendy F. Auslander, Vered Slonim-Nevo, Diane Elze, and Michael Sherraden. Originally published as a special issue of 'Child Welfare', this volume examines lessons learned from a variety of perspectives and settings, and identifies a number of continuing challenges facing the field. 'Children and HIV/AIDS' is an invaluable compendium that should be read by social workers and health specialists and all those affected by the epidemic.

Trends in Basic and Therapeutic Options in HIV Infection - Bartholomew Ibeh 2015-09-02 The past decade has seen several changes in HIV prevention, transmission and therapeutic interventions to end the scourge. This book is a collection of expert assays on various aspects of HIV prevention, bioresource deployment, microbicides, host antiviral proteins, antiviral drug responses and novel treatment strategies for which there is evident need for scientific focus and review of the current trend. A visible objective of the book is to provide a wider readership of scientist, clinicians, social workers/HIV caregivers, immunologist, postgraduate students, trainers and vaccine developers an informative and multidisciplinary approach to HIV treatment and intervention strategy by presenting current trends in the development of therapeutic options and its attendant challenges. Practical and informative, the book provides state-of-the-art information on dynamics of HIV distribution, transmission, therapeutic measures and functional cure.

General Comments of the Committee on the Rights of the Child - UNICEF, Innocenti Research Centre 2006 The present publication contains the eight General Comments issued by the Committee by September 2006, and the CD-ROM accompanying the text includes all the Concluding Observations adopted by the Committee between 1993 and 2006 in relation to State Parties reports presented by all countries of the world. The CD-
ROM also includes the status of ratification of the Convention and its two Optional Protocols, as well as the text of the reservations and/or declarations made by States Parties at the time of signature and ratification of those legal instruments.

**HIV Infection in Children** - Jacqueline Y. Q. Mok 1995-06-15 This very practical and concise volume discusses the epidemiology, diagnosis, natural history, and care of the HIV-infected child. It will be of value to all clinicians in the multidisciplinary team caring for such children.

**The Social Welfare of Women and Children with HIV and AIDS** - Theodore J. Stein 1998 The author explores such issues as discrimination in employment, housing, health care, and education, and looks at medical testing, confidentiality, reproductive freedom, income assistance, child welfare, and child custody. He also examines the statutes that govern the operations of the public systems these people turn to.

**HIV/AIDS and the Care of Children** - 1999

**A Pocket Guide to Adult HIV/AIDS Treatment: Companion to a Guide to Primary Care of People with HIV/AIDS** - U. S. Department of Health and Human Services 2012-09-12 This document is provided as an information resource for physicians and other health care professionals to guide them in the appropriate treatment of patients with HIV/AIDS. Recommendations for care and treatment change rapidly, and opinions can be controversial; therefore, physicians and other health care professionals are encouraged to consult other sources, especially manufacturers’ package inserts, and confirm the information contained in these tables. The individual physician or other health care professional should use his/her best medical judgment in determining appropriate patient care or treatment because no single reference or service can take the place of medical training, education, and experience. Determination of appropriate treatment is the responsibility of the treating physician.
